

On S14 & J30 connections are shown for 10, 31 & 32.
 These connections were for enabling another piece of hardware that could - with the proper modifications to the software - allow a user to make real time changes to a show while watching the show run.
 Vixen has capabilities that are close enough to make me not pursue this option - thus these connections are not needed.

Title			128 Digital - 16 Analog Port Controller
